[SPAM!](#)

Hi I am VERY new to Phorum. My site went live on Friday 13th (Ominious or what!) I have been inundated with Spam...340 messages and counting. How do I fix this? I have tried support docs but its says to sort in settings BUT I can't see where or how. Can some one help me in PLAIN language so I can resolve asap. There are so many, someone has suggested its BOT????

Thanks

Debbie

[Re: SPAM!](#)

Make sure you have spamhurdles module activated and configured to use reCAPTCHA during registration. Make sure to require user email confirmation before they can post anything.

That will eliminate a lot of spam.

If they are still getting through, try the beta stopforumspam module from the add-ons forum.
