[Module BBCode Tag Search](#)

Hi!

Tis is my little mod to make tags in messages.

It makes tags marked with # before as link to the search page.

Source copied from module BBCode Video from Maurice Makaay <maurice@phorum.org>.

Example:

```
Hello #world!  
This is #tag to search.  
Just #click me.
```

becomes:

```
Hello #world!  
This is #tag to search.  
Just #click me.
```

[/code]

Real page example:

[\[kazanauto.ru\]](#)

Attachments:

[Re: Module BBCode Tag Search](#)

Hi Usatyj,

I was just looking for something like this. I think it's really useful. I have one question, maybe you can help me with this... When I use the bbcode tag search, the Search returns me all messages that contains the tag, but without the character "#".

I mean if I have posted #test, I can find all messages that contains the word "test". But I would like to find all messages that contains the word with the hashtag like "#test" (as a mark). Not only "test". I tried to modify the php code but I can't find characters like "#" in the phorum. Could you have some idea?

Thanks!!

[Re: Module BBCode Tag Search](#)

The tag color is not working... with this module. Any idea?

Instead of this:

**Test of red color**

The message show this:

Quote

**[color=#990000] Test of red color[/color]**

I tried to apply the solution of Maurice Makaay in threath [[www.phorum.org](http://www.phorum.org)] but it doesn't work...

Note: I have the versión Phorum 5.2.14

[Re: Module BBCode Tag Search](#)

how is that related to this module? Tag Search is not the bbcode module. To me it sounds like you don't have the bbcode module enabled.

[Re: Module BBCode Tag Search](#)

Hi Tomas,

First of all, thanks for your response. So, I will try to explain better.

I have enabled "BBcode" module, in fact I've never disabled it. You can see it in the attached file "image1.jpg".

The point is when I enabled the module "BBCode Tags Search" it works almost perfectly, but it causes that all texts that I have with some tags, specifically the tag "color" do not display correctly in all messages. But BBcode is still enabled! And if I disable "BBCode Tags Search" again, the tag color is shown correctly as before! It's very strange no??

Then, I have checked which part of the code "BBCode Tags Search" in bbcode\_tag\_search.php causes this problem. And I have detected that the next lines causes this problem. (I suppose that are the same lines which gives the format "#" to the URL)

```
if (isset($message["body"]) && strpos($message["body"], "#")) {  
  
$data[$id]["body"] = preg_replace_callback($search, "search_str_encode", $message["body"]);  
  
}
```

Ok, after that I was looking for a solution and I read in another post that exist a possible problem related with the

---

modules "order" (the module might run after the bbcode module and causes this problem in the tags) You can see it in the attached file "image2.jpg" file.

Then I tried to apply this solution of Maurice Makaay (enabling the module "BB Code always as last formatter" as you can see in "image1.jpg" as well) but it was not successful and at the moment I don't know how to fix the problem.

I hope I explained better, but if you have any question I will answer quickly.

Thanks and best Regards,  
Isaac
