[Language: Finnish](#)

This is a complete Finnish translation for UTF-8. It is based on an old Phorum 3 translation downloaded from here a few years ago. Even though it is complete it might not be very fluent and some translations might be out of context because it has been only used in a forum that doesn't take advantage of many of Phorum's features. Anyway it should work well as a base for improvement.

[Re: Language: Finnish](#)

This is my own version of finnish translation. Hope it's good enough. I don't never use flat structure, so I have no idea, if all the phrases are fluent with it.
