[moderation.php doesn't work](#)

Hi!

For some weeks i'm having a problem with moderation.

I can't:

- MOVE / DELETE / EDIT threads
- DELETE / EDIT posts

The only thing i can do is HIDE threads/posts. It always worked perfect for me as an admin, and for the users, the EDIT mode was set to 5min.

Here is the moderation.php code. If something is wrong, please let me know, it suddenly stopped working....
Thanks!

[Re: moderation.php doesn't work](#)

it doesn't help to post your moderation.php or does that mean that you modified it?

which phorum version are you running?

what do you mean with "doesn't work" is there any error message or what exactly happens?

[Re: moderation.php doesn't work](#)

Ok, i'm running version 5.0.15. What happens? Really simple, when i click on every moderation tool, it appears mi default success message. So, i think the action is already done, but when i come back, the post/thread is just like it was in the begining. So, nothing happens, it never dit EDIT, MOVE or DELETE my post/thread. So, moderation, doesnt work...

Maurice Makaay / April 27, 2008 11:47AM

[Re: moderation.php doesn't work](#)

I have no idea why this is happening for you. We've never seen these issues. This is not really an issue that we will be looking into any further, because Phorum 5.0 is getting really old now that 5.2 is the stable release version. Maybe it's time for you to upgrade your forums. Also to get rid of possible security bugs which might be in your install right now.
