Getting full URL in posts

amnesia / June 15, 2008 02:39AM

[Getting full URL in posts](#)

I know I'm probably being a lazy b*stard, but after searching the terms "Full URL" "full link not showing" etc... I thought I'd start a thread.

I went through the modules but couldn't find one related.

I'd like the full URL of links to be shown rather than just the domain, could someone point me in the right direction?

[Re: Getting full URL in posts](#)

is it really phorum-5.1.x you are using?

The current bbcode module in 5.2 has a setting for that.

Hi,

Quote

amnesia

I know I'm probably being a lazy b*stard,

.. maybe you are - I found that:

[\[www.phorum.org\]](http://www.phorum.org)

using this

[\[www.phorum.org\]](http://www.phorum.org)

For 5.1 that is - for the latest release see Thomas' Comment, of course.
