Hi there,

i am going to use this forum software for my upcoming forum but, i have some question if anyone can help, i will be very thankful to him.

- 1) i want to Make user register and login only through twitter And only those users can post on the forum which are register through twitter.
- 2) if someone posts on the forum that should be automatically posted on the twitter page of that person and if some one reply to that post on the forum that should also be added to the twitter page of that person.  
.Thread-starter can write a link like "google.com" and then the webpage screen frame of "google.com" will appear inside the thread.

- Twitter integration can be coded, but is not fully available like that yet.
- Anonymous forum, depends on what you understand with that but there is no registration needed if you set it up like that.
- Automatic link retrieval can be coded as well
