[Introductions](#)

Hi everyone

so i posted something earlier about a game i play, i was wondering where the topic has moved?  
anyways, i have some questions

1. i need to change the name of the page index.php to forum.php can i do this without any code changes
2. i have an accounts system with multiple profiles per account (5 max), can you please point me to a suitable mod?, topics need to persist after a profile is deleted

my code is open source, you may contribute to it if you wish

-Regards
