[Email extraction from websites](#)

Good morning.

Is it possible to extract all of the emails from a list of links in an excel file column? Once extracted, put them in the cell next to the link.

Thank you

[Re: Email extraction from websites](#)

of course, anything is possible

you'll probably have to use VBA if youre in excel, but it may be easier to export the data as a comma delimited file, then just use some regex to get the format you want
