[display most recent posts](#)

is there a way to display the most recent posts?

more specifically, what i would like to solve the following issue:

i have two forums within my phorum. i want to display the last X (probably 5) posts in each of the forums on another page. is that possible? i've seen it done in phpBB, but i don't want to switch boards just for that one feature.

anyone have any advice?

thanks.
