Edit subthreads.php to link back to message?

Mandingo / July 10, 2004 08:34AM

[Edit subthreads.php to link back to message?](#)

Having trouble doing this - I want the 'subscribed threads' panel in Control Center to link back to the message body of whatever thread is subscribed to. Any ideas?

Good idea, I will add it to the main-code, no need for a hack.

[Re: Edit subthreads.php to link back to message?](#)

It works great, thanks!

I just had another idea, I think it might be good if it were possible for users to subscribe to threads without actually having to post a message to that particular thread?

At the moment, you can only subscribe to a thread that you've actually participated in.

[Re: Edit subthreads.php to link back to message?](#)

Yep, I thought that would be a lot more complicated...it's good to be able to link back for reference though, I think this is a very useful change, so thanks!
