[Invalid id](#)

I've been using Phorum 3 for years. Suddenly, when trying to create a new phorum, I got this error:

Could not create table nav. Database server said "Invalid default value for 'id'"

Any idea what I can do to fix this? Thanks!

[Re: Invalid id](#)

I've got the same Problem with mysql 4.1.10 ...

What should i do !?

[Re: Invalid id](#)

new install? then use phorum5.

for an existing install ... mysql-4.1.x has stricter checking for the create-table statements.

you need to remove the default-value from the auto-increment-columns in db/mysql.php

[Re: Invalid id](#)

I have the same problem, and I found the file but what exactly must I change in de db/mysql.php file? could you be more specific please.

much obliged...
