[host field too small](#)

The host name is too small for some hostnames. I found this problem tonight when trying to post.

I'm running PostgreSQL, so here is how I fixed my tables:

```
begin;  
alter table article_feedback add column host_new text;  
update article_feedback set host_new = host;  
alter table article_feedback alter host_new set default "":bpchar;  
alter table article_feedback alter host_new set not null;  
alter table article_feedback rename host to host_old;  
alter table article_feedback rename host_new to host;  
commit;
```
