[Phorum 3.3.2a Problems](#)

Hi - I am using Phorum 3.3.2a on my site. Recently I have started having problems with tables in my database becoming corrupted. When this happens the threads in the forum are not visible and I can not access the information in the tables with PHPMyadmin. The table must be restored to fix. Any suggestions on how to stop this problem. I have been using Phorum for several years and have never had problems before. Would an upgrade to the current version help?

Thanks. MW

Would an upgrade to the current version help?

Not likely. Table corruption happens in MySQL and Phorum can't cause it. Sounds like your MySQL is crashing over and over.

Check out if the disk you are storing your database tables on isn't running out of space. Could be a reason for your database getting corrupted as well. Like Brain says, it cannot be a Phorum issue.
