Stick and megastick

Avdoshyn Andrej / January 30, 2011 01:41PM

[Stick and megastick](#)

Have an idea of module, which can control stick and megastick messages.

"Stick message" means message which is shown in the top of current forums (in current version we have already this function)

"MegaStick message" means message which is shown in the top of all forums, or on the list of forums which you can set in the admin panel of this module

Thnx, wait for you feedback

Thomas Seifert / January 30, 2011 01:47PM

[Re: Stick and megastick](#)

Your "MegaStick" module is the already existing "Announcements" module which is delivered with every current version.

Edit: only that you can't define on top of which forums you show the announcements ;).

[Re: Stick and megastick](#)

but the request was to show announcement on ALL forums, or on the list of some forums

Thomas Seifert / January 30, 2011 01:53PM

[Re: Stick and megastick](#)

Yeah, like the edit told - that module shows them on ALL forums.

I know of no other module that changes that behaviour but it can surely be the headstart for someone to implement a more sophisticated solution to your needs. I, personally, have no plans to.

[Re: Stick and megastick](#)

Are you talking about "Sticky" function?

[\[my.jetscreenshot.com\]](#)

Message which have sticky flag show only in current forums...

Maybe I have some bug on my forum? But I can't made sticky message accross all forums

Thomas Seifert / January 30, 2011 02:01PM

[Re: Stick and megastick](#)

Again, please see the announcements MODULE in the admin area of your phorum.

It allows to show messages *from a given forum* (which is imply the announcements forum then) on top of all forums (depending on the settings in the module settings of the announcements module).

[Re: Stick and megastick](#)

but it's show last messages of the forum but NOT my message (for example rules of the forum, or important information for all users)

[Re: Stick and megastick](#)

Are your users going to read that information over and over again? If not, then announcements are more friendly to the users, since they won't have to scroll through them all the time (when the module is configured to hide messages that have already been read.)

Forum rules are a bit different of course. You don't want people to overlook them. What I'd do for those, is create a sticky in each forum, containing a link to a central page where you put the forum rules.

[Re: Stick and megastick](#)

1. did you create an announcements forum ONLY for announcements?
 2. did you set this forum as the announcements forum in the module settings?

[Re: Stick and megastick](#)

yes, it's true but in early version there was 2 types of special messages: stick and announcement. stick was show on it's forum, and announcement was shown on all forums.

as for me it was very comfortabse and usefull

Avdoshyn Andrej / January 30, 2011 02:24PM

[Re: Stick and megastick](#)

yeh you are right - it's a way to do this, but creating forum just for announcements...

Thomas Seifert / January 30, 2011 02:42PM

[Re: Stick and megastick](#)

Usually people had more announcements and the forum makes sense for them.

Also moving that part out into a module made the remaining code faster and more stable.
