MAC Address

NancyKP / February 14, 2014 11:12PM

[MAC Address](#)

It would be nice if I could block a user by computer or router MAC Address. Currently if booted, they just create more user IDs and start up again. Even moderated I don't want some of these users on the site. I can't block them by IP address as their IPs are not static.

[Re: MAC Address](#)

You can't block anything in the internet by MAC address. That address is not transferred to your server or through the router at all.

[Re: MAC Address](#)

Are these spammers, or just people you want to get rid of?

NancyKP / February 24, 2014 09:04PM

[Re: MAC Address](#)

People I want to get rid of. When deleted, they create a new user id and start up again.
