[inherited](#)

I have inherited the settings for a forum from another forum, but there is a difference in the look between the two. How is that possible? I made changes to the template, but it shouldn't matter whether I select to inherit the template, or if I go the customize way (choosing the same template in any case)

And how does this all relate to the default template setting?

Thomas Seifert / January 21, 2009 02:51PM

[Re: inherited](#)

how about telling us WHAT the difference in the look is or show us a url to check it out.

default settings are only used for new forums and if a forum is set to inherit from these settings.

[Re: inherited](#)

You should also try a hard refresh (CTRL-F5 or SHIFT-F5 depending on browser) as the browser may try to cache your old template settings.

[Re: inherited](#)

oh and as we are in the 5.1-forums. inheritance had some bugs in 5.1 AFAIK but got far better in 5.2.

[Re: inherited](#)

Sorry for not being more specific - just thought the answer may be straight forward in that I did something wrong. And Joe you were quite correct - a hard refresh did it :) I got real worried there. Would it not be better to force the browser to not cache the template settings?

Thanks anyway.
