[MOD FORUM](#)

Hello, I former military and a programming novice. I am trying to create a website. When reading any message on a phorum such as this one, you see there is an option next to the users name to PM that user. I am attempting to place an image that links to another URL next to that link labeled PM. If anyone here can save me some time, I have a plethora of tools at my disposal and or compensation. Thank you.
