[smilies](#)

<?PHP

```
$pluginreplace = array();
```

```
$pluginreplace[':-)'] = '';
```

```
?>Hello,
```

After reading several messages, I decided to install the smilies. It did not work at first but after editing the "settings.php" file found in the plugin/replace directory it did.

Here is what I had to start with :

```
<?PHP
```

```
$pluginreplace = array();
```

```
$pluginreplace[':-)'] = '';
```

```
?>
```

After taking off all "\" it finally work. Here is the result :

[Re: smilies](#)

Well, that message did not come out very good.

Lets try it again :

I added some smilies to my 3.2.11 version of phorum. At first it did not work but I edited the settings.php file found in the "plugin/replace" directory. What I did was to remove all back slash. Here is the result:

Before:

```
<?PHP
```

```
$pluginreplace = array();
```

```
$pluginreplace[':-)'] = '';
```

```
?>
```

After:

```
<?PHP
```

```
$pluginreplace = array();
```

```
$pluginreplace[':-)'] = '';
```

```
?>
```

Now it work. Do you have any idea why I had to edit the text?

One last question. I took the smilies off the German site. Grwat but I don't read German. Is there a English or French translationsomewhere?

Berst regards,

Yves

[Re: smilies](#)

I don't know why but the code does not come out well. I remove the back slash from the tag.

Hope it work now:

BEFORE EDITING:

```
...img src="\smilies/smilie1.gif" width="\15\" height="\15\"
```

AFTER EDITING:

```
...img src="smilies/smilie1.gif" width="15" height="15"
```
