[ReCaPTCHA not working](#)

Hi

I Have some trouble with Spam Hurdles 2.0.2. I 've try to active recaptcha with public/private key for my domains but it doesn't work. When make a reply form a post the captcha does'nt appear. Instead i' have this error message : An internal error occurred: 4C775B9022830.AB40543.28F0. When i try another type of cpatcha it's work. So how can i do to make recaptcha service work on my forum?

Can anyone help me?

Thanks

[Re: ReCaPTCHA not working](#)

Always having that issue? Some posts in the web suggest that it could be some spurious issue:

[groups.google.com]

If you still have this issue it might be that they changes their api or stuff which needs to be adapted in phorum.

[Re: ReCaPTCHA not working](#)

ReCaptcha V1 shut down 2018-03-31 and doesn't work on phorum anymore.

We need to update to ReCaptcha V2: [developers.google.com]

How can we do this?

Thanks

[Re: ReCaPTCHA not working](#)

I started to take a look at doing this on my site but got distracted by other issues.

Ditto:

Do you know how long we can expect module "spam hurdles" to be down???

ReCaPTCHA not working

Same problem here, is there anybody forked / made it working?

[Re: ReCaPTCHA not working](#)

I'm under constant spam attack on my phorum since reCaptcha v1 is depracated. I would really, really appreciate it someone who knew what they were doing would update the Spam Hurdles module to work with the current version of Google reCaptcha.

[Re: ReCaPTCHA not working](#)

For anyone capable of handling this, there appears to be code that can swap over on top of the spamhurdles recaptcha code to replace it with V2: [github.com]

If anyone has a go at this and gets it working, please post back here

[Re: ReCaPTCHA not working](#)

Yes, I think I am going to have to integrate Solvemedia into my site. It's monitized too.

[Re: ReCaPTCHA not working](#)

Hello everyone.

I was able to get recaptcha 2 working on my site.

Just replace forum/mods/spamhurdles/captcha/class.captcha_recaptcha.php

with the file I've attached.

I've only tested it on my site so I can't promise it will work everywhere. You will still need to set up your captcha private/public keys as before (follow the instructions in the Spam Hurdles mod settings on your admin page). For "What type of CAPTCHA?" select "Code, using the reCAPTCHA service"
