Issue with [url] function

[Issue with \[url\] function](#)

I am trying to insert a link using the `Text` command. The preview shows as '`Text`' as a link not 'Text'. Happens in all templates.

This started happening after an upgrade to 5.2.19 and wampserver 2.0.1e.

The link works fine but my text does not show. Any thoughts.

[Re: Issue with \[url\] function](#)

OK found the issue, unexpected results with windows files and directories which have special characters or spaces in the names. Removed the spaces and special characters in the directory and file names and the posting of the link worked correctly.
