

Phorum Support Forums / 5.2 Modules/Add-Ons

Module: Admin Skins

Ravenswood / July 23, 2009 10:40PM

[Module: Admin Skins](#)

This module allows you to change the appearance of the Phorum Admin screens. The module only affects screens accessed through admin.php and will not affect the look of your forum.

All changes to the admin screens are done through the module. They are not tied-into the templates, but are independent "skins" which can be accessed through the settings of the module. Eight skins are included. A couple of sample skins are shown below.

Aside from the aesthetic aspect, administrators can benefit from using this module when they are working on multiple sites that use Phorum. Each admin panel can be skinned differently so you can know at a glance which system you are in.

Note that this module can only be used on Phorum 5.2.12 or later.
