Phorum-5.2.9a released

---

Thomas Seifert / October 13, 2008 10:44AM

[Phorum-5.2.9a released](#)

This (sub-)release fixes two issues: the bbcode module settings were not completely working and attachments import in the phorum3-conversion wasn't working at all.

The security fix from 5.2.9 is still important, therefore we urge all Phorum users to upgrade as soon as possible.

You can download it from [our downloads page](#).

[Re: Phorum-5.2.9a released](#)

I upgraded and everything seemed to go fine. There is no problem with the admin side of things. However, when I visit the forum as a user I get this error message:

```
Column 'forum_id' in where clause is ambiguous (1052): select phm_user_newflags.forum_id, count(*) as count
from phm_user_newflags inner join phm_messages using (message_id, forum_id) where
phm_user_newflags.user_id=1 and status=2 and forum_id in (5,3,6,4,5,3,6,4) group by forum_id
```

I didn't upgrade the templates because I had made some changes. Could that be the problem?

[Re: Phorum-5.2.9a released](#)

you are using an old mysql, thats the problem.

try to apply this change manually: [\[trac.phorum.org\]](http://trac.phorum.org) .

[Re: Phorum-5.2.9a released](#)

Thanks, error is now:

```
Warning: require_once(/include/db/mysql.php) [function.require-once]: failed to open stream: No such file or
directory in /home//public_html/forum/common.php on line 146
```

```
Fatal error: require_once() [function.require]: Failed opening required './include/db/mysql.php'
(include_path='.:usr/lib/php:usr/local/lib/php') in /home//public_html/forum/common.php on line 146
```

[Re: Phorum-5.2.9a released](#)

---

now you broke the file. you were not meant to remove it, just to change it!

[Re: Phorum-5.2.9a released](#)

I did just change it :) I went to bed after that little setback. When I checked the site this morning it was working fine.

[Re: Phorum-5.2.9a released](#)

Then the file reoccurred. The message really tells us that the file wasn't there. Maybe your host uses some caching or replicating filesystem setup, causing uploads to take a little while to appear on the web server at times.

[Re: Phorum-5.2.9a released](#)

Hello

I applied the patch. Using Mysql 4.1.22

But when I set attachments in the general settings, and then go the index.php page, get the error:

```
-----  
Column 'forum_id' in where clause is ambiguous (1052): select phorum_user_newflags.forum_id, count(*) as count  
from phorum_user_newflags inner join phorum_messages using (message_id, forum_id) where  
phorum_user_newflags.user_id=1 and status=2 and forum_id in (2,1,2,1) group by forum_id
```

Backtrace:

```
Function phorum_database_error called at  
{path to Phorum}/include/db/mysql/mysqli.php:175
```

----

```
Function phorum_db_interact called at  
{path to Phorum}/include/db/mysql.php:4821
```

----

```
Function phorum_db_newflag_count called at  
{path to Phorum}/include/index_new.php:84
```

----

```
Function include_once called at  
{path to Phorum}/index.php:84  
-----
```

Also, I'm confused with patch. The file mysql.php file in the current download is very different from the patched version (which is much larger)

---

Any help?

thanks

[Re: Phorum-5.2.9a released](#)

Sorry, ignore my last comment about the mysql.php file.

Basically, I've applied the patch but still getting the above error

---

Maurice Makaay / January 17, 2009 08:06PM

[Re: Phorum-5.2.9a released](#)

Go for the 5.2.10 RC1 (on the downloads page). Patching the mysql layer should work, but using the new release candidate should be considerably easier.

[Re: Phorum-5.2.9a released](#)

Hello

Thanks, it seems to be working (so far!)

(I've asked my host about upgrading mysql)

The support here is very good
