[Email to forum to create new topic](#)

Hi,

Not too sure if it is viable cos some users has requested for this and I am looking at the feasibility of it.

The scenario is like this, let say a user A just email to this forum, eg, BCD.  
With specially crafted subjects headers to identify forum name, subject etc..

I will post this up to the forum as a new topic. I did something to that aspect but one thing I can't figure out is that what the msg\_id contains.

Cos I can only view the msg in expanded form and not collapsed form

rdgs

Francis
