check in e-mail reply box

Michael Horton / October 14, 2002 11:41AM

[check in e-mail reply box](#)

I'd like to have a 'check' in the "E-mail replies to this thread, to the address above" box by default rather than having people forced to always check it or not. Is there a hack for this somewhere?

thanks

[Re: check in e-mail reply box](#)

Look in the include directory, in the file named form.php. There should be a line containing
`input type="checkbox" name="email_reply" value="Y"`

Simply add ' checked ' after the "Y" so it looks like
`input type="checkbox" name="email_reply" value="Y" checked`
