[HELP!. Need to control access of users to forums](#)

Hi all,

I´ve some forums with a group of users (users who can access each forum), and i need to control when all users of a group (group of users) have read a message posted in one forum.

So, I have:

Forum1 with a group of users 1

Forum2 with a group of users 2

Forum3 with a group of users 3

And I need to know, for example, when all users of group1 have been readed each message posted on forum1.

This is because all messages posted in each forum must be read by all users of the group of users assigned to it forum.

Any idea about how can i do it. Is there any Mod to do it?, Is it included this function into Phorum 5?.

Actually i´m beginning to work with PHP and I don´t know how can i do it?

Really I need help because it´s urgent for me.

Thanks for your time.

Jesus

[Re: HELP!. Need to control access of users to forums](#)

You could do this with a plugin and the read hook. You would need a table to track it all.
