integrating phorum with my site's authentication system

[integrating phorum with my site's authentication system](#)

I am rolling out a sitewide PHP authentication system for my web site and I want phorum to be integrated with it. I already have a phorum up and running and people's user names in the phorum are different than their user names that I am using for the site, however the user names are included in the phorum info somewhere (it is the part of their email address before the @ sign).

I was wondering if anyone knew how I could make it so that users can log into my site and then be automatically logged into the phorum. Thanks.

[Re: integrating phorum with my site's authentication system](#)

Hey, I just finished hardening the Server here and i was wondering if someone that knows how to hack webservers can try and hack my server. most likely he won't succeed but i wont to make sure i did a good job. My site is www.parkavebmw.com As i said the site is bullet proof but you can never be too sure.
