What about private messages ?

[What about private messages ?](#)

Hello,

i wonder if somebody has ever done a mod for phorum to integrate a private message script, or if it's gonna be done soon ?

It would be cool that members could send messages to other members, but a script lighter than those of phpBB & co witch uses lots of ressources ...

[Re: What about private messages ?](#)

I did a script that enables registered users to send messages via centered textfield popup -> into DB -> and to user as soon as he changes a site.

you could test it as a registered user on my site www.kicker-rock.de
after the login you can choose a user in the memberlist and send him (me for example as MICHAEL) a short message by clicking "TELEGRAMM SENDEN".

It would be quite nice to add an icon to the standard navigation bar where the popup opens and you can choose a user by SELECT menu.

I am working on that.

If anybody wants to help me with the script to make it a "perfect" phorum feature please email!!
