Chat box / shout box

[Chat box / shout box](#)

Are there anybody here who is running a chat/shout box alongside the forum? And if so does it use the same users as the forum?

I think that it would be nice to have a chat box for the 'fast and the furious' comments from users, things that does not necessary belongs in threads. And so I would like to have a chat box in a cell much like the Phorum navigation. Does anybody has any experience with that?

[Re: Chat box / shout box](#)

the idea is great.

i have at least a "private message" function with in and out folder.

but i am also deeply looking for a chat in order to get it working with the forums_auth table.

maybe even in an extra window that stays while the forum is also active.
