[moderator function links](#)

ok...if you're logged in as an admin, below every post there are links to move the thread, edit post, etc. problem is, these links are all stacked on top of each other and it stretches out all the posts. which includes do i edit to put them all on one line?

i know virtually nothing about PHP so, i'm going to need pretty specific instructions...

[Re: moderator function links](#)

In phorum 5 you edit list.tpl template. look at the code between

```
{IF MODERATOR true}
```

and

```
{/IF}
```

[Re: moderator function links](#)

is it the same in phorum 3.4.6?

Anonymous User / January 25, 2004 04:42PM

[Re: moderator function links](#)

no, its much different in phorum3 and as you told by your own that you don't have any knowledge in php I wouldn't recommend to change this on your own.
