[Userlist](#)

This script shows a list of all users with their picture and signature. Link to it e.g. at your forums main page.

remember to translate the linguistics in the beginning of the script.

---

Stormi / March 12, 2003 09:59AM

[Re: Userlist](#)

Mhm... I think you forgot the File...

---

Jepp Bundsgaard / March 12, 2003 10:29AM

[Re: Userlist](#)

This is an edited version of the script...

[Re: Userlist](#)

Yes, now it works :-)

But the name is my real name, but i need the Username. How could i change it?

[Re: Userlist](#)

Hi Stormi,

I edited the script directly in the post above to fit your needs.

by the way - with a little creativity I think you would be capable of figuring out what the danish words means - german and danish are after all almost the same language ;-)

[Re: Userlist](#)

You're right, i've translated it already ;-)

It was very easy.

Now it is all perfectly working, well, if you want to look, you can do it here: [www.gwf.gustelli.de/userlist.php](http://www.gwf.gustelli.de/userlist.php) ;-)

I've changed some things so it's like my Homepagedesign ;-)

Thank you for the very good script!

[Re: Userlist](#)

is there an easy way to enable linking through clicking on usernames ?  
i am very slowly learning PHP, but havent been able to do it yet.

---

Jeppe Bundsgaard / April 04, 2003 04:04PM

[Re: Userlist](#)

I guess replacing this:

```
<td valign="middle"><?php echo $row[$show_name];?></td>
```

by this:

```
<td valign="middle"><?php echo "<a href=\"". $row['webpage']. "\">". $row[$show_name]. "</a>";?></td>
```

should do. (And then you can omit the line showing the webpage)

Jeppe

[Re: Userlist](#)

nice script, different than the one I saw on  
[\[havoc.thatbitch.com\]](http://havoc.thatbitch.com)

could you post the complete code including ICQ?!  
i like the picture preview:)

---

Jeppe Bundsgaard / August 14, 2003 03:28AM

[Re: Userlist](#)

You'll have to add two lines like these. Find them in the code and add them there with webpage replaced by ICQ or whatever of the personal information you want.

```
<td class="table-header"><?php echo $IWebpage; ?></td>
```

```
<td valign="middle"><?php echo "<a href=\"". $row['webpage']. "\">". $row['webpage']. "</a>";?></td>
```

jonas@happyntb.org / September 06, 2003 03:18PM

[Re: Userlist](#)

Would't it be even better if a click on the username took you to the users profile?

---

jumper / October 16, 2003 06:22AM

[Re: Userlist](#)

A bug in this one is that it shows the email address even if the user has ticked the "Hide my email from other users".

---

Walrus / November 09, 2003 09:21AM

[Re: Userlist](#)

Fine script, thanx.

---

Sammy / February 03, 2004 05:30PM

[Re: Userlist](#)

Does anybody know how to get tis script :

[\[havoc.thatbitch.com\]](http://havoc.thatbitch.com)

This is great

[Re: Userlist](#)

Hey, I recently found this script and I must admit that it's amusing.

I was trying to improve it a bit, so that clicking one's name would open their profile.

I replaced

```
<td valign="middle"><?php echo $row[$show_name];?></td>
```

with:

```
<td valign="middle"><?php echo "<a  
href=\"\$forum_url/profile.$ext?f=\$ForumId&id=\$head_row[userid]\$GetVars\">\".$row[$show_name].\"</a>\";?></td>
```

With no luck though :-)

I also had to put contents of that page into an extra table, so that the text would be on a readable background. I'm also discovering the possibility to put menus similiar to other pages on that userlist.php

If someone can be of help, even though this topic is somewhat old, I'd be thankful.

Wille

(and the page is [\[www.fromashes.com\]](http://www.fromashes.com))
