[Simple IP BAN](#)

My friend has a website using Phorum 5, there's a bit of disturbance, and we would like to keep some people's ip (or even the entire subnet) out of the forum, because some of those people leeches works published in the forum and claimed to be their own.

However, phorum 5 doesn't seem to have the capability to BAN PEOPLE FROM VIEWING...

is there any mod, plugin, programme or suggestion that might help?

thanks in advance.
